Preparing the Games

Print and Laminate - Print each game board on cardstock or on paper and laminate.

Print on Cardstock – This is an economical way to produce the Bump Games. The game boards can then be put into a sheet protector to make them more durable.

These Bump games require dice and counters to play. Each player will require counters in a different color.

Using the Games

Math Centers - The games are ideal for math center activities.

Whole Class Games - Enlarge a game on a copier and it can be used as a whole class game. The class can sit in a circle on the floor around the board and play in teams or the game board can be attached to a pin board or whiteboard.

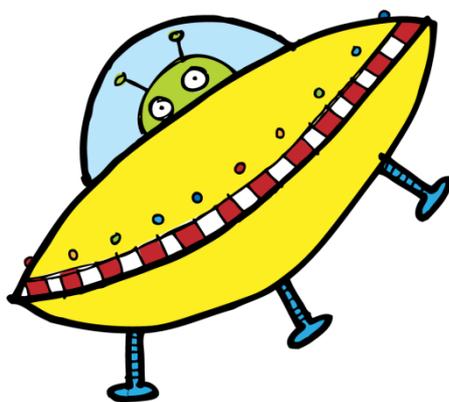

Display on Smartboard – The games can also be used as whole class games by projecting a game onto a Smartboard. This is an ideal way to teach the class how to play the games.

Homework - These games are ideal for homework. They are a fun alternative to regular homework and parents can be involved in playing the games with their children. This is really popular with the kids and the parents.

Fast Finisher – The games are perfect activities for those children who finish their work early. They can be kept in a box of games or on a shelf where the children can access them when they finish their work.

Peer Tutoring - These Board Games are a great activity for students to use to help each other. Pair a weaker student with a stronger student so students can 'tutor' others.

Buddy Class Activity – These games are ideal as a buddy class activity. Have the younger students 'teach' their older buddies how to play the game.

Seven Sharks Bump

Multiplication – Roll 1 **10 Sided Dice** and Multiply by 7

$_ \times 7 = _$

a game for 2 players

Need: 1 10 sided dice and 8 counters per player – each player uses a different color

To Play: Players take turns to roll the dice and then multiply the number by 7. The player then covers this number. For Example: If a player rolls 3, they would cover 21. If the other player has one counter on this number, they can 'bump' that counter off and put one of their own counters on it. You can only 'bump' when there is only one counter on the number. If that number is covered by one of the player's own counters, they can add another counter on top and then they have won that space and no more counters can be added. The winner of the game is the first player to use all 8 of their counters.

Spaceship Bump

Multiplication – Roll 2 10 Sided Dice and Multiply

a game for 2 players

Need: 2 10 Sided Dice and 10 counters per player – each player uses a different color

To Play: Players take turns to roll the dice and then multiply the numbers together. If this answer is on the board, the player then covers this number. For Example: If a player rolls 7 and 6, they would cover 42. If a player rolls 1 and 7, 7 is not on the board so they don't cover anything on this turn.

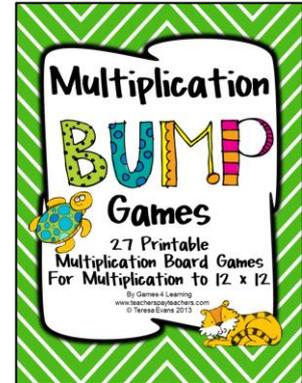

If the other player has one counter on this number, they can 'bump' that counter off and put one of their own counters on it. You can only 'bump' when there is only one counter on the number. If that number is covered by one of the player's own counters, they can add another counter on top and then they have won that space and no more counters can be added. The winner of the game is the first player to use all 10 of their counters.

Thank You!

I would like to take this opportunity to thank you for downloading Multiplication Bump Games Freebie and to wish you and your students lots of fun with these games!

Please consider leaving a comment and rating for the product.
Kind regards,
Teresa

More Multiplication Bump Games are available in -
